Re: IMPORTANT SUPPLY INFORMATION

Phospholine Iodide®
(echothiophate iodide for ophthalmic solution)

Pfizer is currently experiencing a supply delay for PHOSPHOLINE IODIDE (echothiophate iodide for ophthalmic solution). It is estimated that this product will be out-of-stock and on backorder in the United States through June 2014. This shortage is not related to any safety or efficacy concerns, but is due to a delay in manufacturing of the product. Pfizer recognizes the importance of PHOSPHOLINE IODIDE to our customers and patients and is taking action to help minimize the duration of the supply shortage.

Healthcare providers should use their clinical judgment and expertise to determine an alternative treatment option for their patients in the interim. Pfizer cannot make recommendations regarding alternative treatments.

We regret any inconvenience this shortage may cause. For medical questions on PHOSPHOLINE IODIDE, please contact 1-800-438-1985. The product prescribing information may be accessed at www.Pfizer.com.

Sincerely,

Pol Vandenbroucke
