

## What Pfizer's Green Journey Means

To all of us at Pfizer, the commitment to advancing health includes being good stewards of the environment.

We are integrating environmental sustainability into our business -- using our capabilities to focus on three key areas: helping to mitigate climate change and its impacts; minimizing the environmental impact of our products and processes by advancing stewardship across the supply chains and life cycles of our products; and managing water resources in a more sustainable way.

Pfizer is on a Green Journey.

**ENERGY AND CLIMATE CHANGE:** We continue to actively reduce our greenhouse gas emissions by increasing our energy efficiency and implementing clean energy projects where they make good business and environmental sense. This goes beyond Pfizer

facilities to include rethinking the cars and routes used by our sales force and having a better understanding of our extended footprint.

**GREENER PROCESSES:** We seek to minimize the potential impact our products can have – from discovery through to use and disposal. As part of this, we look for innovative ways to reduce our packaging and waste, and additional opportunities to recycle.

**CLEANER WATER:** We continue to assess our global water footprint, decrease water use, and reuse water through water recycling, when possible.

### **Pfizer's Commitment to Environmental Sustainability**

One of Pfizer's four core imperatives is "Earning Greater Respect from Society". Our Green Journey supports this imperative by helping maintain and improve Pfizer's reputation with our customers, the communities in which we operate, and our shareholders. We take a collaborative approach to sustainability practices that produce measurable value for our business and society in reducing reliance on energy and water and looking for innovative ways to better manage waste.

As a demonstration of this commitment we have, with guidance from our stakeholders, set near- and long-term priorities for executing our environmental strategies. Pfizer continues to report on issues and progress, as well as other footprint management measures we are taking including minimizing releases to air and water, reducing waste and increasing recycling efforts.
